AID GIVERS
EXTENDING EQUIPMENT • EXPANDING CARE

MEDICAL EQUIPMENT PARTNERSHIP GUIDE

A registered DBA of Hope Givers Foundation

BRIDGING THE HEALTHCARE GAP

Repurposing Medical Equipment

Strengthening Healthcare Supply Chains

EXTENDING THE LIFE OF MEDICAL EQUIPMENT. EXPANDING ACCESS TO CARE.

Executive Summary

Aid Givers is a registered DBA of Hope Givers Foundation, a Utah-based 501(c)(3) nonprofit organization bridging healthcare and humanitarian needs through medical equipment recovery, stronger healthcare supply chains, and essential assistance.

We connect hospitals and healthcare organizations with serviceable equipment available through upgrades, renovations, replacements, consolidations, or facility changes to approved hospitals and clinics where those resources can continue serving patients.

> ***Our purpose is simple: repurpose valuable medical equipment, strengthen healthcare supply chains, and expand access to patient care.***

Our Priority Equipment Needs

- Medical imaging systems, including MRI, CT, digital and portable X-ray, C-Arms, ultrasound, mammography, and angiography/Cath Lab systems.
- Critical care and ICU equipment, including patient monitors, ventilators, anesthesia machines, infusion pumps, and defibrillators.

A Professional, Coordinated Process

Aid Givers serves as a central point of coordination—from the initial equipment review through documentation, scheduling, protective packaging, transportation, export logistics, delivery, and communication with recipient healthcare facilities. Our goal is to reduce the administrative burden on donor organizations while maintaining professionalism, transparency, and responsible stewardship.

The Value of Partnership

By partnering with Aid Givers, healthcare organizations can extend the impact of their original investment, support physicians and nurses working with limited resources, strengthen clinical capacity, and help more patients gain access to essential diagnostic and treatment services. Every donation represents an opportunity to create meaningful, lasting healthcare impact.

A practical guide for healthcare organizations considering the donation of surplus medical equipment.

About This Guide

This guide introduces Aid Givers and our work to recover and repurpose surplus medical equipment for hospitals and clinics where it can continue improving patient care.

It is intended for hospitals, healthcare systems, biomedical engineering departments, medical equipment manufacturers, distributors, hospital foundations, and healthcare organizations.

Section 1 — Giving Medical Equipment a Second Mission

Every year, hospitals invest in new medical technology to improve patient care. As equipment is upgraded, many systems are replaced because of technological advancement, renovations, standardization, or changing clinical needs. In many cases, these systems continue to possess significant clinical value.

Meanwhile, hospitals and clinics in underserved communities continue to face shortages of diagnostic imaging and critical care equipment that limit their ability to provide timely, high-quality healthcare.

Aid Givers believes that medical equipment still capable of supporting patient care should have the opportunity to continue fulfilling its purpose.

By partnering with hospitals, healthcare systems, manufacturers, distributors, and healthcare professionals, Aid Givers helps recover surplus medical equipment and coordinate its responsible placement with healthcare facilities where it can continue serving patients and strengthening healthcare systems.

Every successful donation represents more than the transfer of equipment. It represents expanded diagnostic capability, improved treatment options, stronger hospitals, better support for healthcare professionals, and better care for patients.

Section 2 — Who We Are

Aid Givers is a registered DBA of Hope Givers Foundation, a Utah-based 501(c)(3) nonprofit organization bridging healthcare and humanitarian needs through medical equipment recovery, stronger healthcare supply chains, and essential assistance.

We partner with hospitals, healthcare systems, medical equipment manufacturers, distributors, biomedical engineering departments, and healthcare professionals to identify surplus medical equipment that has completed its service within one facility but can continue improving patient care in another.

Our work is founded on a simple belief:

Medical equipment should never stop improving lives simply because it has been replaced.

Aid Givers bridges the gap between hospitals with surplus equipment and hospitals where that equipment can continue making a meaningful impact.

Our responsibility extends beyond transportation. We coordinate donations, documentation, logistics, and communication between donor organizations and recipient hospitals to help ensure every donation is managed professionally, transparently, and responsibly.

Mission

We connect donated medical resources with healthcare providers serving communities where access to essential equipment and care remains limited.

Vision

A world where valuable medical resources are never wasted, healthcare systems are strengthened, and underserved communities have access to quality care and humanitarian support.

Core Values

Responsible Stewardship

We believe quality medical equipment represents an investment in healthcare that should continue benefiting patients whenever practical and appropriate.

Integrity

Every partnership is built on honesty, accountability, and transparent communication.

Collaboration

Meaningful healthcare improvements are achieved through partnerships among hospitals, healthcare professionals, manufacturers, distributors, and humanitarian organizations.

Sustainability

We strive to create long-term healthcare impact by extending the useful life of valuable medical equipment.

Humanitarian Service

Alongside BHCC, Heela Foundation, and ASRA Foundation, Aid Givers supports healthcare access, clean water, orphans, vulnerable families, Ramadan packages, and Qurbani assistance in Afghanistan.

Why We Exist

While one hospital upgrades to newer technology, another hospital may still lack access to the very equipment being replaced.

Aid Givers exists to bridge that gap responsibly, professionally, and transparently. We believe every successful donation creates value for both organizations: the donating institution extends the impact of its investment, while the receiving hospital gains access to equipment that strengthens patient care.

Section 3 — What We Do

Aid Givers coordinates the recovery, preparation, and responsible delivery of surplus medical equipment through four core services.

Medical Equipment Recovery

We work with hospitals and healthcare organizations to identify surplus equipment made available through upgrades, renovations, replacements, consolidations, or facility closures.

Donation Coordination

We coordinate donor communication, inventory documentation, logistics planning, and recipient hospital coordination to simplify the donation process.

International Logistics

We coordinate export documentation, palletization, protective packaging, container loading, and international transportation.

Hospital Support

We work with recipient hospitals to coordinate delivery and support successful implementation of donated equipment.

Equipment We Commonly Seek

Medical Imaging

X-ray, portable X-ray, CT, MRI, ultrasound, portable ultrasound, C-arm, mammography, angiography/Cath Lab, digital radiography panels, and compatible components and accessories.

Critical Care & ICU

Ventilators, patient monitors, anesthesia machines, infusion pumps, defibrillators, and other approved critical-care equipment.

Every Donation Has a Destination

Whether a hospital donates a single patient monitor or an entire imaging department, every contribution has the potential to strengthen healthcare delivery where resources are limited.

Behind every piece of medical equipment is a physician waiting to use it, a nurse depending on it, a family hoping for answers, and a patient whose life may be changed because one hospital chose to give that equipment a second mission.

Section 4 — Why Partner With Aid Givers

Every year, healthcare organizations make significant investments in new medical technology to enhance patient care, improve operational efficiency, and meet evolving clinical standards. As these investments are made, existing equipment is often retired to make way for newer systems.

Although replacement is a normal part of healthcare, many of these systems continue to possess substantial clinical value and remain capable of supporting quality patient care.

For hospitals, determining the most responsible path forward for surplus medical equipment can present logistical and administrative challenges. Identifying qualified recipient organizations, coordinating transportation, managing documentation, and arranging international logistics often require considerable time and resources.

Aid Givers was established to help simplify that process.

By serving as a trusted nonprofit partner, we coordinate the responsible recovery and redistribution of surplus medical equipment, allowing healthcare organizations to extend the impact of their equipment while supporting hospitals and clinics with limited access to essential medical technology.

Rather than viewing retired equipment as an end-of-life asset, we view it as an opportunity to improve healthcare elsewhere.

A Simple and Professional Donation Process

Our objective is to make equipment donations as efficient and straightforward as possible for donor organizations.

Aid Givers serves as a central point of coordination throughout the donation process, working closely with hospital staff to organize equipment inventories, coordinate documentation, arrange logistics, and facilitate communication with recipient healthcare facilities.

By managing these responsibilities, we help reduce the administrative burden on donor organizations while ensuring each project is handled professionally and transparently.

Extending the Value of Medical Equipment

Medical equipment represents a significant investment in patient care.

While equipment may no longer meet the operational requirements of one institution, it can continue providing meaningful clinical value in another healthcare setting where similar technology remains urgently needed.

By donating surplus equipment, healthcare organizations extend the impact of their original investment while helping improve diagnostic capabilities, treatment options, and clinical services for patients who might otherwise have limited access to advanced medical technology.

Supporting Healthcare Beyond Our Communities

Every successful equipment donation contributes to something much larger than the transfer of medical devices.

It supports physicians working with limited resources.
It strengthens hospitals serving growing patient populations.
It expands access to diagnostic imaging, surgical care, laboratory services, and critical care.
Most importantly, it helps improve the quality of care available to patients and families.

Through responsible partnerships, surplus medical equipment becomes a lasting investment in healthier communities.

Built on Trust and Accountability

Hospitals place significant trust in the organizations they choose to work with.

Aid Givers recognizes that responsibility and is committed to conducting every project with professionalism, integrity, and transparency.

From the initial conversation through final delivery, we strive to maintain clear communication, careful coordination, and responsible stewardship of every donated system entrusted to our organization.

Creating Lasting Impact Together

Meaningful improvements in healthcare cannot be achieved by a single organization alone.

They are made possible through collaboration among hospitals, healthcare professionals, manufacturers, distributors, nonprofit organizations, and philanthropic partners who share a common commitment to expanding access to quality healthcare.

When hospitals partner with Aid Givers, they help valuable medical equipment continue fulfilling its purpose - improving patient care, strengthening healthcare systems, and expanding access for underserved communities.

Section 5 — How the Donation Process Works

Aid Givers understands that every healthcare organization has its own internal procedures for managing surplus medical equipment. Our role is to make the donation process organized, transparent, and as straightforward as possible while respecting each donor's policies and timelines.

Although every project is unique, most equipment donations follow the same general process.

1. Initial Conversation

We begin by discussing your organization's surplus medical equipment, donation goals, and internal procedures. This conversation helps us understand the types of equipment available and determine whether the donation aligns with current healthcare needs.

2. Equipment Review

Our team works with the donor to review the available equipment inventory. This may include equipment lists, photographs, model information, or other documentation needed to understand what is available for donation.

3. Donation Planning

Once equipment has been identified, we coordinate the documentation, scheduling, logistics planning, and communication necessary to prepare the donation. We work closely with the donor organization to minimize disruption to normal hospital operations.

4. Logistics Coordination

Aid Givers coordinates packaging, palletization, transportation, export documentation, and international shipping with qualified logistics partners. Throughout the process, we maintain communication with both the donor organization and the receiving healthcare facility.

5. Delivery to Recipient Healthcare Facilities

Equipment is delivered to approved recipient hospitals and healthcare organizations where it can continue supporting patient care. We work with our partners to help ensure equipment reaches its intended destination responsibly and efficiently.

6. Continuing the Partnership

Many donor organizations choose to build long-term relationships with Aid Givers. As equipment inventories change over time, we remain available to assist with future donation opportunities and continue expanding healthcare access through responsible equipment recovery.

Our Commitment Throughout the Process

Every donation represents a partnership built on trust. Aid Givers is committed to maintaining professional communication, responsible coordination, and transparent stewardship from the initial discussion through final delivery. Our objective is to make every donation process efficient for the donor while maximizing the humanitarian impact of each contribution.

Section 6 — Medical Equipment We Seek

Aid Givers works with healthcare organizations to recover a wide range of surplus medical equipment that can continue supporting patient care in hospitals and clinics where access to these technologies remains limited. While every donation is evaluated individually, the following categories represent the equipment most frequently requested by our healthcare partners.

Medical Imaging

Advanced diagnostic imaging plays a critical role in modern healthcare. We are particularly interested in:

- MRI Systems
- CT Scanners
- Digital Radiography (DR)
- Portable X-ray Systems
- X-ray Systems
- Mobile C-Arms
- Angiography / Cath Lab Systems
- Ultrasound Systems
- Portable Ultrasound
- Mammography Systems
- Compatible Imaging Components and Accessories
- These technologies help physicians diagnose disease earlier, improve treatment planning, and expand access to quality imaging services.

Critical Care & ICU

Equipment commonly requested includes:

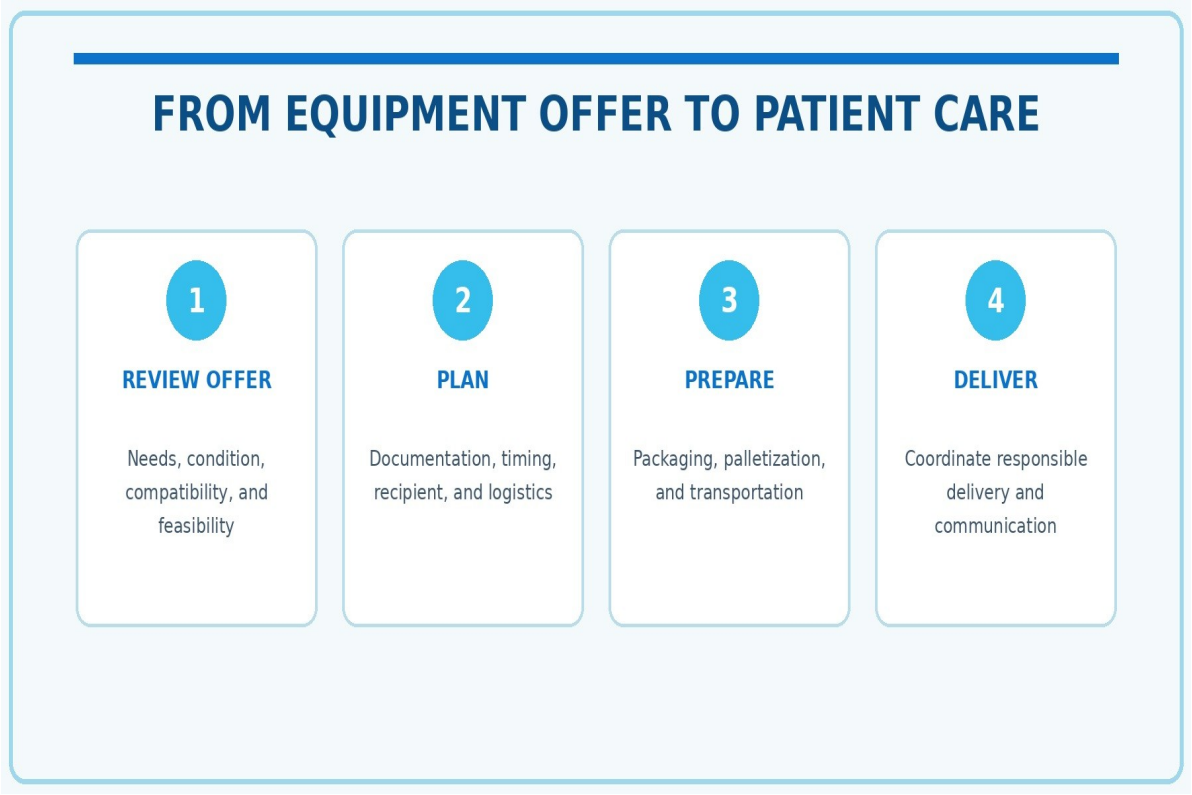

- Patient Monitors
- Ventilators
- Anesthesia Machines
- Infusion Pumps
- Defibrillators
- Other Approved Critical-Care Equipment
- These systems support critically ill patients and strengthen intensive care capabilities.

Not Sure if Your Equipment Qualifies?

If you are uncertain whether specific equipment is appropriate for donation, we encourage you to contact Aid Givers. Our team is happy to review your inventory and discuss current needs with no obligation. Many organizations are surprised to learn that equipment they no longer need can continue making a meaningful impact elsewhere.

Section 7 - From Equipment Offer to Patient Care

A responsible equipment donation requires careful review, documentation, preparation, logistics, and communication. Aid Givers coordinates these steps with donor organizations and intended recipient facilities so approved equipment can move from an initial offer toward continued patient care.

A Responsible, Coordinated Process

Each offer is evaluated according to current program needs, equipment condition, compatibility, documentation, and shipping feasibility. Submission of an offer does not guarantee acceptance, and equipment should not be shipped or delivered until Aid Givers provides approval.

What Aid Givers Coordinates

Reviews equipment details, photographs, condition, age, accessories, manuals, and service records.

Confirms whether the equipment matches a current need at an intended recipient facility.

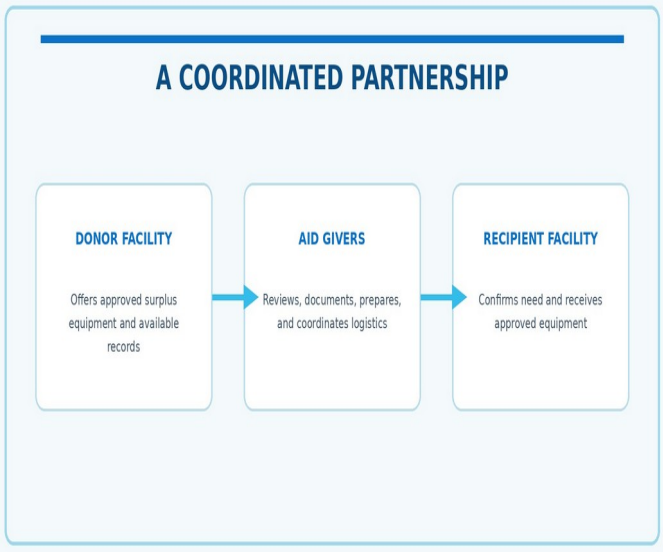

Coordinates donor documentation, pickup timing, protective packaging, palletization, and transportation planning.

Maintains communication with donor organizations, logistics providers, and recipient facilities.

Supports responsible delivery so approved equipment can continue serving patients.

Why the Process Matters

Well-coordinated donations can extend the useful life of valuable medical technology, reduce avoidable waste, strengthen hospital capacity, and expand access to diagnosis, treatment, and critical care where resources remain limited.

More Than Equipment

An equipment partnership is more than transportation. It requires responsible stewardship, clear communication, realistic equipment review, and coordination among the donor, Aid Givers, logistics providers, and the intended recipient facility.

Documentation & Accountability

Aid Givers maintains equipment information and coordinates donation documentation, recipient details, shipment records, and available follow-up reporting according to the needs and requirements of each partnership.

Section 8 - Connected Healthcare & Humanitarian Model

The Aid Givers website presents one connected model: recover medical resources, prepare and deliver approved equipment, and expand care. Alongside that equipment work, sister organizations in Afghanistan provide healthcare and humanitarian services that respond to additional community needs.

The Website's Connected Model

Recover - Surplus medical equipment is reviewed and given continued purpose. Deliver - Approved equipment is prepared and coordinated for delivery to hospitals and clinics with limited resources. Expand Care - Healthcare providers gain tools that can strengthen diagnosis, treatment, and patient care.

Recover. Prepare. Deliver.

Aid Givers coordinates equipment documentation, protective preparation, palletization, transportation planning, and communication with intended recipient facilities. Each approved shipment is organized according to the needs, timeline, and requirements of the specific partnership.

HOW WE CREATE IMPACT

1 MEDICAL EQUIPMENT

Recovering and preparing surplus equipment for continued patient care.

2 HEALTHCARE ACCESS

Supporting essential clinical services through collaboration with BHCC.

3 FAMILY SUPPORT

Helping vulnerable families and orphans through sister organizations.

4 CLEAN WATER

Supporting deep wells and hand pumps for communities in need.

Healthcare Access Through BHCC

Blossom Health Care Center — Kabul, Afghanistan

Our Sister Organizations

Aid Givers works alongside Blossom Health Care Center (BHCC), Heela Foundation, and ASRA Foundation. Each sister organization contributes established experience within its own area of service in Afghanistan.

Connected Programs

The live website presents five connected program areas: Medical Equipment & Supply Chain Support; Healthcare Access & Clinical Services; Clean Water Projects; Orphan & Family Support; and Ramadan Packages & Qurbani. Afghanistan is the primary geographic focus.

Looking Forward

Aid Givers is committed to expanding its network of hospital partners, increasing the number of medical equipment donations coordinated each year, and strengthening healthcare systems through responsible stewardship of surplus medical equipment. Every new partnership represents another opportunity to improve patient care and extend the life of valuable medical technology.

Section 9 — Become a Partner

Improving healthcare is a shared responsibility. Hospitals, healthcare systems, manufacturers, distributors, and nonprofit organizations each have an important role in ensuring valuable medical equipment continues serving patients whenever possible.

Aid Givers invites healthcare organizations to become part of that mission by partnering with us to recover and responsibly redistribute surplus medical equipment.

Who We Partner With

We welcome partnerships with:

- Hospitals and Healthcare Systems
- Biomedical Engineering Departments
- Medical Equipment Manufacturers
- Medical Equipment Distributors
- Hospital Foundations
- Ambulatory Surgery Centers
- Imaging Centers
- Healthcare Networks and Humanitarian Organizations

How to Get Started

Beginning the conversation is simple.

1. Contact Aid Givers to discuss available surplus equipment.
2. Share an inventory list, photographs, or basic equipment information.
3. Our team will review the opportunity and discuss current needs.
4. Together, we will coordinate the documentation, logistics, and donation process.

Every inquiry is welcomed, and there is no obligation to proceed after the initial discussion.

What You Can Expect

When you partner with Aid Givers, you can expect:

- Professional communication
- Transparent coordination
- Respect for your organization's policies and timelines
- Responsible stewardship of donated medical equipment
- A collaborative approach focused on maximizing humanitarian impact

Let's Start the Conversation

Whether your organization is replacing a single imaging system or evaluating an entire inventory of surplus medical equipment, Aid Givers would welcome the opportunity to discuss how those resources can continue improving patient care.

Every partnership begins with a conversation. Together, we can extend the life of valuable medical equipment, strengthen healthcare supply chains, and improve access to quality care for underserved communities.
